

Renuka Poluru

Lead Forward Deployment Engineer | AI Product Engineer

Bangalore | 7348870730 | renukapoluruv@gmail.com | [LinkedIn](#) | [GitHub Website](#)

PROFESSIONAL SUMMARY

Lead Forward Deployment Engineer and AI Product Engineer with 10 years of experience building customer-facing fintech platforms, workflow consoles, secure integrations, analytics, and operational tooling. Recent work includes ProdAigy, an AI copilot for enterprise banking product configuration that helps portfolio managers select product templates, fill forms, generate safe YAML changes, and move changes through human-approved deployment workflows.

FORWARD DEPLOYMENT FIT

- **Customer implementation:** Delivered banking product-configuration, AI copilot, and operations-workbench capabilities from POC through UAT, production-like testing, and controlled rollout.
- **AI solution engineering:** Built LLM orchestration, tool calling, schema-constrained outputs, YAML patch generation, document-assisted form filling, human approval flows, and AI observability.
- **Operational ownership:** Reduced manual setup and investigation through dashboards, lifecycle traceability, Git-backed change requests, workflow automation, deployment checks, and release-readiness programs.

CORE SKILLS

Product & Delivery: Forward deployment, customer discovery, solution engineering, product implementation, stakeholder management, release planning, UAT coordination, production rollout

AI Engineering: Azure AI models, AI SDK, LLM tool calling, prompt orchestration, context grounding, structured outputs, JSON Schema, Zod, YAML generation, response repair, sensitive-field redaction

Engineering: TypeScript, JavaScript, Vue.js, Angular, Vite, Pinia, Vuex, NestJS, Node.js, tRPC, Axios, REST APIs, TypeORM, PostgreSQL, Redshift, Redis, Jest, Cypress

Platforms: AI-assisted product configuration, banking operations consoles, Git-backed configuration, micro-frontends, enterprise design systems, Docker, Helm, Kubernetes, Jenkins, Prometheus, OpenTelemetry, Winston, RBAC

PROFESSIONAL EXPERIENCE

Zeta | Lead Software Engineer | Sep 2019 - Present

Recent AI Project: ProdAigy

- Built and deployed ProdAigy, an AI copilot that helps bank portfolio managers create, update, and validate financial product bundles across card, payment, account, wallet, notification, and policy configurations.
- Designed LLM workflows for product-template recommendation, guided configuration, document-assisted form filling, YAML generation, and change-proposal journeys.
- Added AI guardrails with JSON Schema, Zod, catalog reconciliation, editable-path validation, response parsing/repair, sensitive-field redaction, and scoped transient document context.
- Built human-in-the-loop change flows where AI proposes minimal YAML patches, shows confirmation cards and diffs, and applies updates only after explicit user approval.
- Productionized the AI workflow with Redis-backed session memory, auth-aware service calls, Prometheus metrics, structured logging, OpenTelemetry tracing, Docker builds, and Helm/Kubernetes deployment configs.

Product Configuration & Operations Platforms

- Owned end-to-end delivery of product-configuration and bundle-operations tools used by operations teams to configure, monitor, issue, and troubleshoot banking product bundles.
- Built the initial product-configuration platform POC and first release, including spreadsheet-based data-entry flows, bank-client UAT deployment, product bundle backfill, and team onboarding.

- Designed operations-workbench consoles for product bundles, issuance requests, status details, dashboards, application tracking, and application details, reducing dependence on backend/API lookups.
- Delivered card and bundle issuance flows including primary card, add-on card, reissue/replacement-style actions, PIN setup, and account activation across pre-production and production environments.
- Shipped dynamic form builder, reusable API-backed search, and analytics capabilities using schema-based forms, interactive charts, Redshift APIs, session-based authorization, and TypeORM queries.
- Improved governance and release reliability with RBAC, dual-approval overrides, API-call validation, asset-security fixes, workflow automation, deployment checks, Git-backed environment promotion, and bug-bash release readiness.
- Onboarded frontend engineers through architecture walkthroughs, internal tooling guidance, deployment-process support, and codebase orientation.

iOSys | Frontend Developer | Aug 2016 - Aug 2019

- Implemented pixel-perfect, responsive websites and web interfaces using HTML, CSS, JavaScript, and Angular.
- Converted UI designs into production-ready pages with strong attention to layout accuracy, cross-browser behavior, responsive structure, and maintainable front-end code.
- Collaborated with design and engineering stakeholders to deliver reliable customer-facing web experiences and support iterative improvements across web projects.

HACKATHONS & AWARDS

- 2025 | Second-Place Winner - Pixel Hackathon, Zeta
- 2024 | Outstanding performance recognition
- 2022 | Outstanding performance recognition
- 2020 | Outstanding performance recognition
- 2020 | Winner — Kreate Hackathon, held by MoneyOnClick and organized by Kalaari Capital
- 2019 | Best API Usage Award — WMN Hackathon, HERE Technologies
- 2018 | Second Place - Winner - Hedera18 Hackathon India

EDUCATION

Bachelor of Technology: NRI Institute of Technology | 2012-2016 | 70%

Intermediate: Sri Chaitanya Junior College | 2010-2012 | 90%
