

Renuka Poluru

Lead Software Engineer Frontend Platforms and AI Products

Bangalore, India • 7348870730 • renukapoluruv@gmail.com • linkedin.com/in/renuka-poluru-710262b7 • renukapoluru.github.io

PROFESSIONAL SUMMARY

Lead Software Engineer with 10+ years of experience building secure, high-scale enterprise web platforms and AI-assisted products. Hands-on technical leader for a 10-engineer team, with experience in TypeScript, JavaScript, Vue 3, Angular, Node.js, modular frontend architecture, API integration, platform reliability, and multi-region delivery. Defined a reusable product-configuration architecture adopted by 20+ financial institutions, supporting self-service management of 100+ financial products and reducing configuration turnaround from 3-4 weeks to under 7 days with 98% configuration correctness.

TECHNICAL SKILLS

Frontend Technologies: Core web: HTML5, CSS3, SASS/SCSS, LESS, JavaScript (ES6+/ES2022+), TypeScript; React ecosystem: React 18+ (Hooks, Concurrent Mode, Suspense, Server Components, code splitting), Redux Toolkit, MobX, Context API, MUI (Material UI), Next.js 14 (SSR/ISR); Angular ecosystem: Angular 17, Angular 18 (Standalone Components, Signals, Reactive Forms, NgRx, RxJS, lazy loading, AOT, OnPush, Angular Universal SSR); UI and design systems: Bootstrap, Tailwind CSS, Storybook; architecture and build tooling: micro frontends, Module Federation, Webpack, Vite, Babel; real-time and quality: WebSocket, Server-Sent Events (SSE), responsive web design, WCAG/ARIA accessibility, reusable component architecture

Backend Technologies: Node.js, NestJS, Java, Spring Boot, REST APIs, tRPC, TypeORM, Kafka, RBAC

Databases: PostgreSQL, Firestore, Redshift, Redis

CI & CD Tools: CI/CD, Jenkins, Docker, Helm, Kubernetes, Nginx, CDN and edge caching, multi-region deployments, Prometheus, OpenTelemetry, structured logging, automated regression testing

AI & GenAI Tools: OpenAI APIs (GPT-4o, GPT-4 Turbo, Embeddings, Assistants API, Function Calling), LangChain, LangGraph, RAG architecture, agentic AI, multi-agent systems, LLM harnesses/scaffolds, agentic loops, tool-calling architectures, vector databases, Hugging Face, AWS SageMaker, data preparation for LLM, prompt engineering, AI guardrails, AI governance, AI security, AI evaluation frameworks, AI observability, Cursor AI, GitHub Copilot

PROFESSIONAL EXPERIENCE

Zeta | Lead Software Engineer | Aug 2025 - Present

Full Stack Platform Architecture and AI Product Engineering

- Architected and deployed an AI-assisted configuration product that creates, updates, and validates banking product bundles across cards, payments, accounts, wallets, notifications, and policy domains; reduced end-to-end configuration turnaround from 3-4 weeks to under 7 days with 98% configuration correctness.
- Designed secure, human-in-the-loop workflows for AI-assisted configuration changes, including request clarification, approved-template constraints, schema and rule validation, user approval, role-based OAuth authorization, and compliance checks before enterprise-system changes.
- Led full-stack delivery for 10 direct reports through architecture and code reviews, hiring, performance management, mentoring, and technical guidance; coordinated execution with product, security, and business stakeholders.
- Created a reusable JDK 21 modernization workflow adopted by 12+ teams across 30+ services, automating code changes, pull-request generation, and test validation to reduce modernization turnaround from 3-4 weeks to 4 days.

Zeta | Senior Software Engineer | Sep 2022 - Jul 2025*Product Configuration and Operations Workbenches*

- Defined the blueprint-driven architecture for financial-product configuration, standardizing reusable templates, input flows, validation, and bundle creation; replaced a multi-team intake process with self-service workflows adopted by 20+ financial institutions for 100+ actively managed products.
- Built Product Center and Bundles Workbench capabilities including product-bundle creation, HDFC UAT deployment, role-based authorization, issuance tracking, Bundle Details, Schema Builder, and operations workflows.
- Used Vue 3, Module Federation, Nginx, CDN and edge caching, and multi-region deployment patterns on Product Center; established automated regression suites and release controls for bi-monthly production releases.

Zeta | Software Engineer II | Jul 2020 - Jun 2022*Reusable Frontend Workflows and Reliability*

- Developed reusable configuration and operations workflows, supported higher-zone deployment readiness, and improved release reliability through environment validation and automation.
- Resolved a VBO Center security issue through automated logo migration to common assets; onboarded Gamma frontend engineers to Zeta tools, architecture, codebase conventions, and deployment processes.

Zeta | Software Engineer I | Sep 2019 - Jun 2020*Frontend Engineering Foundations*

- Contributed to frontend delivery for enterprise financial-product configuration experiences, building the domain and engineering foundation for later Product Center and operations-platform ownership.

iOSys | Software Engineer | Aug 2016 - Aug 2019*Client Delivery and Component Based Frontend Engineering*

- Owned end-to-end delivery for 50+ customer portals, CMS sites, and e-commerce flows, from requirements, estimation, and technical approach through Angular implementation, testing, deployment, and post-launch support.
- Engineered reusable Angular components and API-integrated responsive experiences, collaborating with design and backend teams on performance, accessibility, cross-browser quality, and A/B testing of UI variations.

ACHIEVEMENTS

- Second-Place Winner - Zeta Pixel Hackathon (2025)
- Outstanding Performance Recognition (2024)
- Outstanding Performance Recognition (2022)
- Winner - Kreate Hackathon (2020), held by MoneyOnClick and organized by Kalaari Capital
- Outstanding Performance Recognition (2020)
- Best API Usage Award - WMN Hackathon, HERE Technologies (2019)
- Second Place - Hedera18 Hackathon India (2018)

EDUCATION**Bachelor of Technology** | NRI Institute of Technology | 2012 - 2016
